                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 36 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

New vectors for gene therapy, partic for tumours - comprising

New vectors for gene therapy, partic for tumours - comprising

The partic material encoding one or more cistron(s) which express

For immunogenic or therapeutic peptide(s)

The partic marginal sequence gene, contains the plasmid bNA encoding the chart with man MIA-BY and light (beta-2 microglobulin) proteins of a class I major hisococompatibility complex (MHC) antigen. The plasmid is designed to express these two proteins via a bicistronic mRNA in class I major hisococompatibility complex (MHC) antigen. The plasmid is designed to express these two proteins via a bicistronic mRNA in class I major hisococompatibility complex (MHC) antigen of the plasmid is charinal repeat. Termination of transcription of the mRNA is dependent on a Rous Sarcoma Virus (RSV) promoter sequence deriv. from the 3' long terminal repeat. Termination of the heavy chain is regulated by the CTE. Finally the replication of the plasmid in controlled by the CTE. Finally the replication of the plasmid in bacterial cells is controlled by the presence of a bacterial origin of replication. The vector is used partic. for the treatment of neoplastic for the classes, eg. melanoma, and provides enhanced gene delivery and expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New CRIPTO gene CR-1 and CRIPTO-related gene CR-3 genomic DNA - CR-3 protein and anti-CR-3 antibodies, useful in immunoassay to detect CR-3 as tumnour specific marker

Disclosure: Page 29: 44pp; English.

The CR-3 nucleotide sequence was isolated from a human genomic library using a labelled DNA fragment containing 800bp upstream of the translation initiation site of CR-1. Clones were isolated which contained the 5' CDNA non-coding region of CR-3. One clone was
                                                                                                                                                                                                                                                                                                                                                                                          1163 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28-AUG-1992 (first entry)

sequenced and found to include a complete CRIPTO CDNA lacking introns and containing a poly(A) tract at the 3' end. Seven single base pair substitutions were observed in the coding region (c.f., CR-1 sequence in Ciccodicola A. et al., EMBO J.81.987-1991(1989)), six of which gave rise to amino acid changes. The 3' non-coding sequence is less similar (97% identical) to CR-1. Most of the differences occur in the inverted Alu sequence. The unusual poly(A) addition site AGTAAA found in the CR-1 gene is also conserved in CR-3. The similarity between CR-1 and CR-3 extends for 697 nucleotides upstream of the initiator AUG where it is possible to observe 7 base pair substitutions and 6 nucleotide deletions. The 14 "Others" in the sequence represent nucleotides whose clemental of the initiation and continued deletions. The 14 "Others" in the sequence represent nucleotides whose the sequence printed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            seq_documentation_block:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New DNA encoding the human CRIPTO-related gene product CR-3 - used to produce recombinant protein, useful for preparation of diagnostic antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tills encodes a human CRIPTO-related gene product CR-3. CR-3 is thought to be a tumour-specific marker and as such DNA and amino acid sequences of CR-3 and derivatives can be used in the diagnosis, prognosis and possibly treatment of some types of cancer. CR-3 includes a region homologous to products of the epidermal growth factor superfamily of genes and it may be a mitogen involved in regulating proliferation, differentiation and transformation of sequence 2675 BP; 618 C; 555 G; 763 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2 GlyArgLeuAsnArgLeuSerGlu.....ArgArgGluSerLeuArgAs 16

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mutation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mutation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mutation
```

```
This sequence represents the CRPTO-related gene, CR-3. The CR-3 gene sequence is identical to the human CRIPTO gene with the exception of eight base pair substitutions that give rise to six amino acid changes. GR-3 exhibits partial amino acid sequence homology and a tertiary structure within a 38 amino acid sequence homology and a tertiary structure within a 38 amino acid region similar to the epidermal growth factor (EGF) supergens family that includes EGF, TGF-alpha and amphirequilm. Expression of CR-3 may serve as a tumour specific marker as it is expressed in several human colon cancer cell lines and possibly in human colorectal tumours. The assay of the amount of CR-3 in a sample can be used in studies on the regulation of the proliferation, differentiation, and transformation of various mesenchymal and epithelial cells. Study of the expression of CR-3 may also be used in the diagnosis, prognosis and treatment of tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Assays for CRIPTO-related gene product CR-3 - used in studies on the regulation of the proliferation, differentiation and transformation of cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human CRIPTO-related gene(CR-3).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                               AND PROPERTIONS OF THE PROPERTY OF THE PROPERT
                                                                                                                                                                                                                                                                                                  Example 3; Columns 17-22; 26pp; English.

The present sequence encodes a human CRIPTO-related protein CR-3. The present sequence encodes a human CRIPTO-related protein CR-3. The specification describes an antibody which has binding affining to CR-3 and not to CR-1. The antibodies can be used for the detection of CR-3. CR-3 is a regulatory molecule involved in regulating the proliferation, calliferentiation, and transformation of various mesenchymal and epithelial cells. In addition expression of CR-3 may serve as a tumour specific marker that may have applicability in the diagnosis, prognosis and possible treatment of specific types of cancer.

                                                                                                                                                                                                                New antibody to human CRIPTO-related polypeptide-3 - used for the detection of CRIPTO-related polypeptide-3 which is involved in the regulation of the proliferation, differentiation and transformation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New CRIPTO gene CR-1 and CRIPTO-related gene CR-3 genomic DNA - CR-3 protein and anti-CR-3 antibodies, useful in immunoassay to detect CR-3 as tumour specific marker
Disclosure: Page 22: 44pp; English.
The CR-1 genomic clone can be used in transgenic animals to examine the effects of overexpression of this gene on development and tumorigenicity and to study regulation of CR-1 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1699 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-AUG-1992 (first entry)

Suppression of specific classes of soybean seed protein genes - useful to change seed storage protein profiles of transgenic plants bisclosure; Page 29-30; Sapp: English.

This sequence represents the coding sequence for the alpha subunit of the soybean seed protein beta-conglycinin. The method of the invention is for reducing the quantity of a soybean seed storage protein (A), such as beta-conglycinin, in soybeans. It comprises: (a) constructing a chimeric gene comprising: (i) a nucleic acid fragment encoding all or a portion of (A) placed in sense or antisense orientation region; (b) creating a transgenic soybean cell the chimeric gene of (1); and (ill) a transcriptional termination region; (b) creating a transgenic soybean cell the chimeric gene of (a); and (c) growing the transgenic soybean cell the chimeric gene of (a); and (c) growing the transgenic conditions that result in expression of the chimeric gene of (a); where the quantity of one or more members of a class of (A) subunits is reduced when compared to soybeans not containing the chimeric gene of (a); the method is used to construct transgenic soybean lines where the expression of genes encoding (A) are modulated to effect a change in seed storage protein profile of transgenic plants.
                                                                                                                                    The present sequence encodes a human CRIPTO-related protein CR-1. The specification describes an antibody which has binding affinity to CR-3 and not to CR-1. The antibodies can be used for the detection of CR-3. CR-3 is a regulatory molecule involved in regulating the proliferation, differentiation, and transformation of various mesenchymal and epithelial cells. In addition expression of CR-3 may serve as a tumour specific marker that may have applicability in the diagnosis, prognosis and possible treatment of specific types of cancer. Sequence 5761 BP; 1529 A; 1304 C; 1229 G; 1699 T;
                                                 New antibody to human CRIPTO-related polypeptide-3 - used for the detection of CRIPTO-related polypeptide-3 which is involved in the regulation of the proliferation, differentiation and transformation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10-JUN-1998 (first entry)
Coding sequence for the alpha subunit of beta-conglycinin.

Claim 1) Page 412-413; 2084pp; English.

A computer readable medium has been developed which has recorded on it
A computer readable medium has been developed which has recorded on it
922 nucleotide sequences isolated from the Enterococcus faecalis genome.
X12938 to X13919 represent these nucleotide sequences which are primary
nucleotide sequences, also known as contigs. The computer-based system
can identify fragments of the Enterococcus faecalis genome with
commercial importance. The products can be used to detect the presence
of Enterococcus faecalis in samples. They can also be used for
diagnosing Enterococcus infection in an animal and monitoring
progression of disease, and for identifying agents which can be used to
modulate the growth or pathogenicity of Enterococcus faecalis, or
another related organism, in vivo or in vitro. In particular the
polypeptides encoded by the Enterococcus faecalis nucleotide sequences
can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    12-NOV-1998.

New isolated Enterococcus faecalis polynucleotides and polypeptides

used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus
Modification of the seed storage protein profile can result in the production of novel soy protein products with unique and valuable functional characteristics.

The present sequence encodes a secreted protein. The polynucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating activity, issue growth activity, activity, haematopolesis regulating activity, tissue growth activity, activity,inhibin activity, chemotactic/chemokinetic activity, activity,inhibin activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity (no data is given in the specification to support these activities). The polynucleotide is also stated to be useful for gene therapy.

Sequence 745 BP; 179 A; 229 C; 176 G; 161 T;
  chemokinetic activity; haemostasis; thrombolytic activity; receptor; ligand; anti-inflammatory; cadherin; tumour invasion suppressor; tumour inhibition; gene therapy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA encoding TIE ligands 3 and 4 - useful for, e.g. blocking blood vessel growth and promoting neovascularisation, etc.
                                                                                                                                                                                                                                                                                                                         New polynucleotides encoding secreted human proteins - derived fro human foetal brain, adult brain, foetal kidney, placenta or adult pineal gland cDNA 11braties. Claim 26; Page 80; 113pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tyrosine kinase; mouse;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            22-JUN-1998 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotides encoding human secreted proteins - derived from
e.g. human blood, kidney, foetal lung, placenta, testes, brain,
ovary, pituitary, retina and colon cDNA libraries.
To Claim 1: Page 171; 618pp: English.
The present sequence represents a human expressed sequence tag (EST).
The polynucleotide, which is a secreted EST, and the encoded protein
are predicted to have useful biological activities which would make
them suitable for treating, preventing or ameliorating medical
conditions in humans and animals, although no supporting data is
given. Suggested activities include nutritional activity, immune
stivity, tissue growth activity, activin/inhibin activity,
chemotactic/chemokinetic activity, haematopolesis regulating
activity, receptor/ligand activity, anti-inflammatory activity,
catherin/tumour invasion suppressor activity, tumour inhibition
activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 25-FEB-1999 (first entry)

Claim 23; Fig 6A-B; 86pp; English.

This cDNA sequence includes a coding region for novel mouse TIE ligand-3 (mTL-4, see W26792), a TIE-2 receptor ligand that is a tyrosine kinase with immunoglobulin and epidermal growth factor homology domains. It was obtained by PCR amplification of CDNA derived from mouse cell lines C2012ras and M687 using primars (see 19959-96) specific for mTL3. A host-vector system for the production of mTL-3 is claimed, as well as an antibody which precifically binds mTL-3, a receptorbody which specifically binds mTL-3, a conjugate comprising mTL-3 and a cytotoxic agent, and an isolated nucleic acid (see T99593) coding for human TIE ligand (see W26791). TL3, TL4, their antagonists, etc. are useful for blocking blood vessel growth, promoting neovascularisation promoting or blocking the growth or differentiation of a cell expressing the TIE receptor and attenuating or preventing tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /*tag= b

The tumour rejection antigen precursor (TRAP) is processed to a tumour rejection antigen (TRA) presented by HLA-A2 molecules. TRA is used to generate cytotoxic I lymphocytes for treating cancer (espimelanoma). It can also be used to raise specific antibodies, and when complexed with HLA-A2, it can be used to prduce vaccines. Cytotoxic I lymphocytes so generated can be used in adoptive transfer or generated, or they can be generated in vivo by using a vector containing the appropriate gene or using TRA or TRAP together with an adjuvant that facilitates entry into HLA-A2 presenting cells. New immunomodulating dimer peptide(s) - based on a Class I HiA-B
alpha-1 domain, used for preventing rejection of transplants or
treating autoimmune diseases
Example 1; Page 19; 41pp; English.

CC cartivity. A peptide-type compound or variant is claimed which has
the remainal and activity, including the N-terminal acylated and/or
CC-terminal and and examples to esterified forms of up to 60 amino acids, where
CC cartivity and activity, including the N-terminal acylated and/or
CC creminal and and the compound comprises the formula; A-B, where A, B =
CC Small amino acid; aa82 = R or L; aa83 = G or R; and as represents amino
acid. The sequence in the brackets may optionally be absent or truncated
at any peptide type bond within the brackets. The compounds comprise
at any peptide type bond within the brackets. The compounds comprise
at any peptide type bond within the brackets. The compounds comprise
on the capture of thibit cytocoxic T-lymphocytes (CTL) from
cacid. They can be used to inhibit cytocoxic T-lymphocytes (CTL) from
conditionation with antiquic peptides or proteins of interest to
activate CTLS. They can also inhibit the proliferation of T cells in
response to anti-CD3. The peptide can be used for preventing rejection
continuated arthritis and lupus erythematosis. The products can also be

New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.

Claim 17: Page 35: 41pp; English.

This sequence represents a specifically claimed immunomodulating dimer peptide of the invention. A peptide-type compound or variant is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula: A-B, where A, B = (R aaf6-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a represents amino acid; are sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytocoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proflicration of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ä

R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of The peptides are administered to a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to administered to administeration for alimited period of time (compared to the lifetime modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HLA-B2702 CTL modulating peptide (B2702.84-75/75-84). Cytotoxic I lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.

CC 895413 and 895415-89541 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the HLA-BZ00 84-75-84 palindrome. These sequences can be used to isolate the protein p74 from a T-cell lysate. p74 is a T-cell surface membrane control associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein HSC70.

CC protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein HSC70.

CC protein associated number of cell types, but is particularly expressed on B and T cells. P74 can be isolated by 19sis of a suitable coll with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-BZ702 palindromic peptide.

CC compositions comprising the extracellular fragment of p74 combined with the extracellular portion of p74 induces calcium influx, and inhibits compounds can be screened for their effect on the cytolysis. Candidate compounds them with the extracellular portion of p74 induces calcium influx.

CC containing T-cells and antigen presenting cells (APCs), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete with p74 for the binding of the p74 ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    19-JUN-1998 (first entry)
Immunomodulating dimer peptide #1.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
Lansplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;

treating autoimmune diseases

Claim 16; Page 35; 41pp; English.

This sequence represents a specifically claimed immunomodulating
dimer peptide of the invention. A peptide-type compound or variant is
claimed which has immunomodulating activity, including the N-terminal
acylated and/or C-terminal amidated or esterified forms of up to 60
comino acids, where the peptide-type compound comprises the formula; A-B,
where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or
V; aa77 = D, S or N; aa79 = R or G; aa80 = 1 or N; aa81, aa81 = E or
Aydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and as
represents amino acid. The sequence in the brackets may optionally be
absent or truncated at any peptide type bond within the brackets. The
compounds comprise amino acid sequences related to a Class I HLA-B
alphal domain (positions 79-84). They can be used to inhibit cytotoxic
T-lymphocytes (CTL) from undesirably attacking cells in a host or in
proteins of interest to activate CTLs. They can also inhibit the
protiferation of reals in response to anti-CD3. The peptide can be
used for preventing rejection of transplants or for treating autoimmune
diseases, e.g. diabetes, rheumatoid atthritis and lupus erythematosis.

The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R829307-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to abaltic the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HLA-B2702 CTL modulating peptide (B2702.84-75/75-84(T)). Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.

                                                                                                                                                                                                                                                                                                                                                                                                                        Example 15; Page 36; 80pp; English.
R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence class I major histocompatibility complex (MHC) antigens. This sequence I san inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HAA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly of the patient.
                                                                                                                  16-MAY-1996 (first entry)

HLA-B2702 CIL modulating peptide (B2702.84-75(T)/75-84).

Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.

Example 1, Page 19; 41pp; English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19-JUN-1998 (first entry)
Peptide B2702.84-75r/75-84 tested for immunomodulating activity.
Immunomodulating dimer: immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                             Extension of acceptance period of transplants from MHC unmatched donor hosts – using Class I B75-84 MHC antigen of the recipient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..

PP 4-MAY-1996; DEAD TO PREVENTING TEJECTION OF TRANSPLANTS OF TRANSPLAIN OF TRANSPLA
the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-771) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa14 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HIA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, insending atthritis and lupus erythematosis. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        19-JUN-1998 (first entry)
Petide B2702.84-75/75-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

14-MAY-1998 (first entry)
Human neuronal nicotinic acetylcholine receptor alpha-3 subunit.
Human; neuronal nicotinic acetylcholine receptor; alpha-3 subunit;
brain tissue; screening; NRChR; antibody.
                                                                                                                                                         Example 4: Page 45: 103pp; English.
R71424-R71438 are human major histocompatibility complex class 1
(MHC 1) alpha 1 domain derived peptides and peptide mutants, they were used to modulate interactions between MHC 1 and cell surface receptors. Via competitive inhibition the peptides diminish the receptors response, this feature may be useful for the treatment
                                                                                                    Regulating cell surface receptor response - by modulating interaction between MHC class I antigen and the cell surface
                                                                                                                                                                                                                                                                                                                                                                      Score 35; DB 1; Length 18; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         reri 3-194940/L/20.

Tomposns. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Example: Page 12: 29pp; English.

CC R95413, and R95415-R9543 represent palindromes and fragments of human-leucocyte-associated antigens. This sequences can be used to isolate the protein p74 from a T-cell lyactivation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Exc.

CC membrane protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein Exc.

CC modical and in a limited number of cell types, but is a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of p74 combined with HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis.

CC andidate compounds can be screened for their effect on the cytolysis.

CC aciivity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by Sequence 20 AA; Ingand.

Example 2: Page 72-73; 99pp; English.

The present sequence represents a human neuronal nicotinic acetylcholine receptor (NAChR) subunit. The cells expressing the alpha and/or beta NAChR subunits may be used in a method of screening compounds to identify any which modulate the activity of human neuronal NAChR.

Subunit specific antibodies may be used to monitor the distribution and expression density of various subunits in normal vs diseased brain tissues. Testing of single receptor subunits or specific receptor subunit combinations with respect to the function and activity of the individual subunits and should lead to the identification and design of compounds that are capable of very specific interaction with one or more receptor subtypes. The resulting duraction with one or more receptor subtypes than drugs identified e.g. screening with cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 15; Page 36; 80pp; English.
R83061-R83085, R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is a dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B3702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16-MAY-1996 (first entry)
HLA-B2702 CTL modulating peptide (B2702.84-75).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                          K
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
"Cytoplasmic dynein and actin-related protein Arpl are required for normal nuclear distribution in filamentous fungi.";

"Cytoplasmic dynein and actin-related protein Arpl are required for normal nuclear distribution in filamentous fungi.";

-i. ell biol. 127:139-149(1994).

-i. FUNCTION: DYNEIN HAS ATPASE ACTIVITY. CYTOPLASMIC DYNEIN ACTS AS MOTOR FOR THE INTRACELULAR RETROGRADE MOTILITY OF VESICLES AND ORGANELLES ALONG MICROTUBULES. REQUIRED TO MAINTAIN UNIFORM NUCLEAR DISTRIBUTION IN HYPHAE.

-i. SUBUNIT: CONSISTS OF AT LEAST TWO HEAVY CHAINS AND A NUMBER OF INTERMEDIATE AND LIGHT CHAINS.

-i. SUBCELLULAR LOCATION: CYTOPLASMIC.

-i. SIMILARITY: BELONGS TO THE DYNEIN HEAVY CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GU L.J., WENMAN W.M., REMACHA M., MEUSER R.U., COFFIN J.M., KAUL F
